

High Security Solutions *for the* Utility Market

ABLOY® High Security Locking Solutions *deliver* Maximum Asset Security

ABLOY® Locking Systems provide the Utilities Industry with Maximum Security solutions, internal accountability, and high levels of performance in harsh conditions. Benefits include increased asset security, lock longevity and ease of use as well as significant reduction in administration and maintenance costs.

Maximum Security

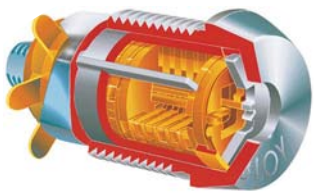

The heavy duty construction of **ABLOY®** locks provides maximum resistance against physical attack. The unique design provides virtually pickproof locks. The hardened, free spinning protection plate prevents drill bits from penetrating the lock. **ABLOY®** locks are key-retaining while unlocked to prevent leaving the site before re-locking. In addition, these locks are re-keyable in the event of key loss or theft. Liabilities are minimized by preventing unauthorized entry.

The next level in Maximum Security locking solutions, **ABLOY® SMARTDISC** revolutionizes industrial locking by combining proven mechanical locking solutions with electronic access control. The mechanical lock ensures physical security, while the micro-electronics provide flexibility and a unique electronic key code for every lock and key. The electronics provide intelligent high security industrial locks which offer flexible reporting to fit your tracking requirements as well as accommodating daily or even hourly secured access time frames.

Accountability

ABLOY® offers advanced Maximum Security cylinder designs that are unique in construction, utilizing rotating detainer discs which provide over 1.97 billion different key combinations for large systems, including master keying capabilities. Each key code is exclusively assigned to the users' system. All **ABLOY®** cylinder product models can be made to operate with just one key.

The **ABLOY®** system offers the highest level of key control with factory restricted, patented key profiles and key security levels. Key duplication is available only with proper authorizations. Due to unique design, **ABLOY®** keys are extremely difficult to copy key cuts or impression. Key records are securely protected by the factory to allow for internal audits.

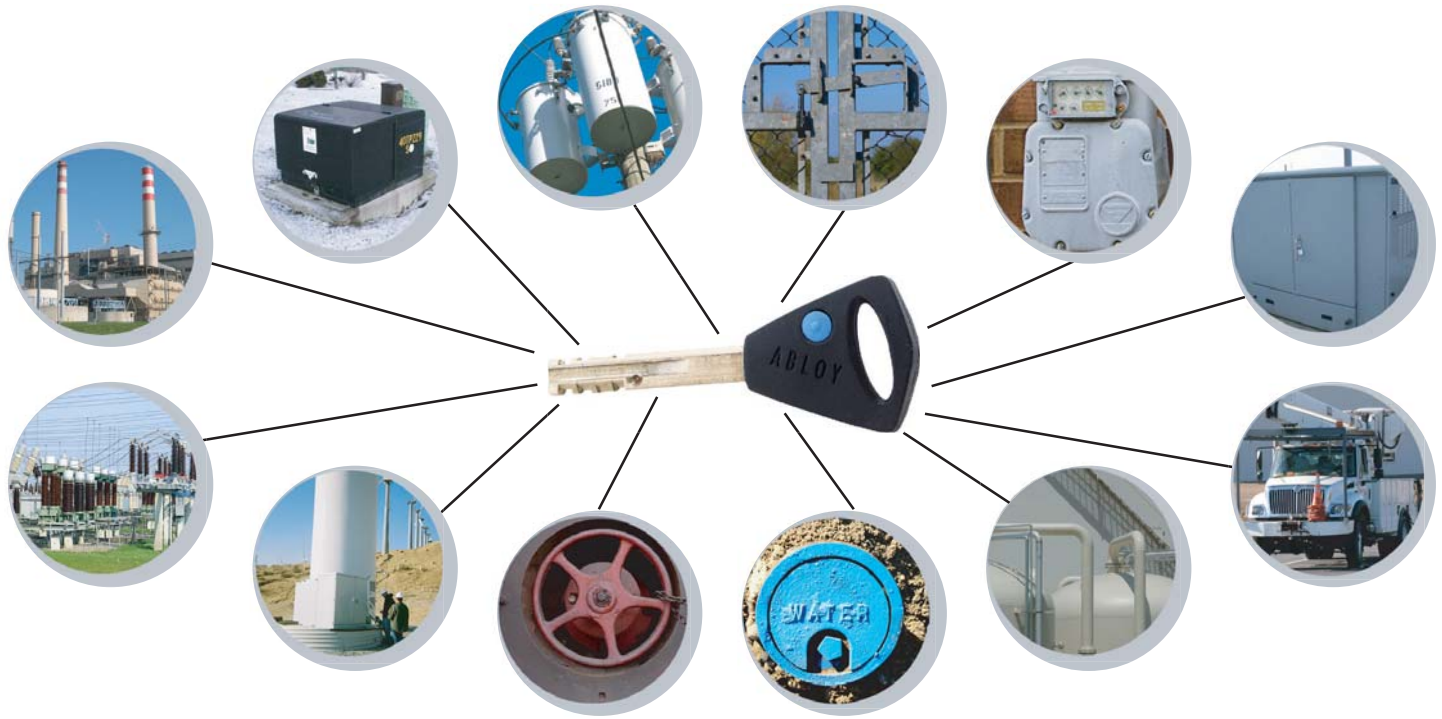

Performance

The unique materials and surface treatments used by **ABLOY®** guarantee that the corrosion resistance of both the visible parts of each lock as well as the internal parts are at a superior level. The **ABLOY®** system's spring-free construction prevents locks from jamming and provides for effortless key entry and rotations. The ease of use of **ABLOY®** locks minimize wear of key and lock cylinder and reduces maintenance and the need for replacements.

ABLOY® locks are widely used by the government, utilities, and national transportation organizations since all the component parts are highly resistant to wear, dirt, moisture, corrosion and freezing. **ABLOY®** locks are recommended as the best products for all types of weather ranging from freezing to coastal conditions.

HIGH SECURITY PROTECTION IN EVERY APPLICATION

Master Keying

The unique **ABLOY**® rotating detainer disc cylinder mechanism offers extensive master keying possibilities due to the billions of different key combinations available. All **ABLOY**® cylinder products from door locks, cam locks, furniture locks to padlocks can be made to operate with just one key.

Locking Solutions

ABLOY® offers a complete range of Maximum Security locking solutions to fit the varied security requirements across the Utility Industry including: cam locks, padlocks, puck locks, door locks, flexible keyring locks, hasps and more. **ABLOY**® locking systems provide convenience, durability, security and customer satisfaction.

ABLOY® Padlocks

These padlocks provide superior performance in a wide range of applications: storage areas, pad-mounted transformers, valves, gates, pressure stations, substations, transmission generation plants, underground piping and transportation.

ABLOY® SMARTDISC

Systems can reach the next level of Security with increased flexibility, control, tracking technology and keying possibilities.

SHUT-OUT® Heavy Duty Puck Lock

This Puck Lock features an **ABLOY**® lock cylinder and provides unique strength and durability. Applications: service vans and trucks, storage containers, tool job boxes.

ABLOY® Door Locks

The **ABLOY**® cylinder provides superior master keying features without compromising security. Retrofit cylinders can be supplied to fit most housings. Applications: facility doors, cabinets and storage areas.

SHUT-OUT® Defender

This lock features an **ABLOY**® lock cylinder and fits snugly over the residential gas or water meter coupling nut, defending against theft and delivering maximum asset security.

SHUT-OUT® Hasps

These hasps provide a complete security solution and are available for both **ABLOY**® Padlocks and **SHUT-OUT**® Puck Locks. These are designed for use in a flush mount application.

ABLOY® Industrial Locks

Abloy Oy is one of the leading manufacturers of locks, locking systems and architectural hardware and the world's leading developer of products in the field of electromechanical locking technology.

ASSA ABLOY

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user needs for security, safety and convenience.
