Abloy Security, Inc. Secures Residential Service Revenues with High Security Locking Solutions: See them at the Water Security Congress

IRVING, TX, April 3, 2008 - Abloy Security, Inc. will be exhibiting **ABLOY**[®] High Security Locking Solutions featuring the **SHUT-OUT**[®] Defender for the Water Utilities Industry at the upcoming Water Security Congress hosted by the American Water Works Association. The **SHUT-OUT**[®] Defender is the High Security solution for residential water revenue control. The Water Security Congress is taking place April 6-8, 2008 at the Millennium Hotel in Cincinnati, Ohio. Abloy Security will be exhibiting in Booth 203.

Residential theft from Water and Gas Utilities has been an increasing issue. In working with utility companies, Abloy Security has designed the patent-pending **SHUT-OUT**[®] Defender to secure revenues by preventing redirection of piping to bypass residential meters. The **SHUT-OUT**[®] Defender fits snugly over the meter coupling nut, defending against theft and delivering maximum asset security. Constructed of hardened steel, the **SHUT-OUT**[®] Defender features a High Security **ABLOY**[®] cylinder with steel body and hardened steel, chrome plated face.

The unique materials and surface treatments used by **ABLOY**[®] guarantee a superior level of corrosion resistance of both the visible parts of each lock as well as the internal parts. **ABLOY**[®] locks are recommended as the best products for all types of weather ranging from freezing to coastal environments since all component parts are highly resistant to wear, dirt, moisture, corrosion and freezing. The spring free construction prevents the locks from jamming and ensures smooth operation.

ABLOY[®] High Security locking solutions offer a level of performance and protection which remains unsurpassed. With high resistance to physical attack and tampering, **ABLOY**[®] provides dependable durability even when used in harsh environmental conditions. Patented key control with the **ABLOY**[®] EXEC key series restricts key duplication to authorized personnel. Coupled with the **ABLOY**[®] systems' extensive master-keying possibilities, this provides for a secure and operationally convenient system. **ABLOY**[®] locks are widely used by utilities, government and national transportation organizations given that all the component parts are highly resistant to wear, dirt, moisture, corrosion and freezing.

Abloy Security, Inc. is a GSA contractor and offers a complete range of maximum security locking solutions to fit the varied requirements of the Utility Industry. Additional solutions designed for these markets include the, **ABLOY**[®] PL Series Padlocks, **ABLOY**[®] Door Locks, **ABLOY**[®] SMARTDISC (electromechanical locks), **SHUT-OUT**[®] Puck Locks and Hasps.
